# REPORT UPON

## Births, Marriages and Deaths

### FOR THE YEAR 1922

---

Herewith is presented the Fifty-third Report of Vital Statistics for the Province of Ontario for the year 1922.

#### POPULATION.

The estimated population for 1922 is 2,981,182. The city municipalities contain 1,192,619, or 40% of the whole, the towns of 5,000 population and over, ~~160,192~~ or 5.4%, while the balance, 1,628,421 or 54.6% is contained in the villages, towns under 5,000 population and the rural portions of the Province.

160,142

#### BIRTHS (EXCLUDING STILL-BIRTHS).

	1922	Ratio	1921	Ratio
Entire Province.....	71,320 ✓	23.9	74,152	25.3
Cities.....	30,645	25.7	32,260	27.7
Towns.....	4,855	30.3	4,876	31.2
Rural.....	35,820	22.0	37,016	22.9

There was a numerical decrease of 2,832 in the whole Province: this represents 0.38%, and is not the first time that the number of births has declined from a preceding year, but these declinations have always been negligible and have not been for any two successive years; excepting during the war years 1916 and 1917, following 1915 a rise has followed a decline.

For comparative purposes the number of births and birth rate for a decade are herewith presented:

Year	Births	Ratio	Year	Births	Ratio
1913.....	64,516	24.7	1918.....	64,729	23.0
1914.....	66,225	25.0	1919.....	62,774	22.0
1915.....	67,032	24.9	1920.....	72,511	25.1
1916.....	65,264	23.9	1921.....	74,152	25.3
1917.....	62,666	22.6	1922.....	71,320	23.9

The mothers of three ages, viz: 24, 25 and 26 years, contributed 17.85% of the whole number of births. The youngest mother was thirteen years of age, and the eldest fifty-three years. Eighteen men became fathers of legitimate children before reaching eighteen years of age while seven fathers were over seventy-five years. (See page 6.)

There were 36,477 male children born to 34,883 female or 104.5 males to 100 females. The greatest number of births occurred in March.

### ILLEGITIMATE BIRTHS.

The number of these births was 1,510, which gave a rate of 21.2 per 1,000 living births. This is 0.3 lower than for the preceding year. Over 36% of these births occurred before mothers were 20 years of age, and nearly 68% before the mothers had reached 25 years of age. The balance is fairly distributed. Women over 40 years of age contributed one per cent. of the total illegitimacy. One of the mothers was 12 years of age; four were 13, and fifteen but 14 years old, while thirty-one children of 15 years became mothers.

### MULTIPLE BIRTHS.

There were 739 pairs of twins, 730 boys, and 748 girls. There were just half as many triplets this year as last, viz. six sets, composed of thirteen boys and five girls.

### MARRIAGES.

The number of marriages registered during the year was 23,360 distributed as follows:

	1922	Ratio	1921	Ratio
Entire Province.....	23,360	7.8	24,871	8.5
Cities.....	13,336	11.2	14,134	12.2
Towns.....	1,607	10.0	1,672	10.7
Rural.....	8,417	5.2	9,065	5.6

(For further comparisons, see Table No. 5.)

There was a numerical decrease of 1,511 marriages, being a decrease of 0.7 in the rate. This is a continuation of a decline, as the rate in 1921 was 1.5 less than that of 1920 which was 10.8. The rate reached its apex in 1912, after which it declined fairly regularly until 1919, when it took a sudden rise. This is accounted for by the return of the men from military service. Another rise took place in 1920 from the same cause. But in 1922, the rate slumped to practically as low a point as it held in 1917, which was the lowest since 1900. Economic conditions may be blamed largely for the decline in the marriage rate as a tight money market and lack of employment always depresses the number of marriages.

## DEATHS.

There were 34,034 deaths registered during 1922, with a rate of 11.42 per 1,000 of population. This is the lowest rate since 1896, when it was 10.7.

	1922		1921

Total.....											53.92%

In the foregoing table it may be noted from the last column that these ten causes of death account for 53.92% of all deaths. The table does not include deaths from congenital debility. Were they added to the ten above noted then 63.75% of all deaths would be accounted for in this small group.

## DEATHS FROM TUBERCULOSIS.

The total number of deaths registered in 1922 was 1,979, being a rate of 66.4 deaths per 100,000 of population. In 1921, the rate was 71.0 and was the lowest rate ever recorded. This record is improved.

The two years are compared in the following table:

	1922		1921	
	Deaths	Ratio	Deaths	Ratio
Province.....	1,979	66.4	2,083	71.0
Cities.....	728	61.0	773	66.5
Towns.....	120	75.0	133	84.9
Rural.....	1,131	69.4	1,177	72.9

The number of males was 966, and females 1,013. This total number of deaths represented 5.82% of the number of deaths registered.

The following table show deaths from tuberculosis by age groups for a decade.

### ORGANIC HEART DISEASES.

This title includes deaths from heart diseases of all kinds (excepting "heart failure") including pericarditis, endomyocarditis, endocarditis, angina pectoris and all other diseases affecting the organ itself. As usual, the number of deaths from diseases of the heart exceeds those of any other one pathological condition. The rate is higher than in any year yet reported, being 126.0 per 100,000 of population, or more than one-tenth of all deaths are from a heart condition. The total number of deaths reported was 3,756.

### CANCER.

The number of deaths reported from cancer for 1922, was 2,609, and indicates a rate of 87.5 deaths for each 100,000 of the population. This is a slight decline in the rate. There were twenty-four more deaths registered, but the rate fell off by 0.6. There were 301 more deaths among females than males. The following is the general classification.

	Males	Females
Cancer of the buccal cavity.....	80	14
" " stomach and liver.....	477	392
" " peritoneum, intestines and rectum.....	203	235
" " female genital organs.....	..	244
" " breast.....	..	231
" " skin.....	49	23
" " unspecified organs.....	379	277

The following table gives the number of deaths for each 100,000 of population for a decade, showing the classification.

Up to 40 years of age there are comparatively few deaths; after this age is reached the number of deaths increased with each year up to the sixties, when there was a decline; about 95% of all cancer deaths occurred after the age of 40 years.

### INFANT MORTALITY.

The number of children who died during the first twelve months of age was 5,921, being at the rate of 83.0 per 1,000 living births. This was 842 fewer than in the previous year, and the rate was 8.0 per 1,000 less. This is the lowest rate ever experienced in the Province.

The following table presents the infant mortality rate for a decade and gives an analysis of the principal causes, i.e., the classification of diseases from which 100 or more children died.

A more complete analysis of these deaths for the current year is presented on page 64.

From this table it will be noted how critical is the first week of life, 39.3% of all deaths under one occurred during this period. Again, 53.75% took place during the first month of life. The pathological causes, diarrhoea and stomach diseases, took 810 or 13.67% of the whole, while the respiratory causes took 749 or 12.64%; these two causes alone being responsible for 26.31 of the total number of deaths under one year.

The number of deaths and infant mortality for the cities and towns of 5,000 population and over is herewith presented:

Influenza.....	7,337	262.1	2,522	88.8	3,276	113.1	509	17.3	960	32.2

In the above table it may be noted that there is a decided falling off in the number and rates of these communicable diseases with the exception of deaths from measles and influenza, which show an increase in the rate of 0.4 per 100,000 of population. The splendid decline of 1921 was interrupted and an increase of 88.5% in the number of deaths in that year is shown. The actual increase is 451 and the rate is increased by 16.9 per 100,000 of population.

## STILL-BIRTHS.

These births are not included in any statistics whatever. They are noted here for information only. The number registered as births was 3,021. There were 2,946 registered as deaths.

Year	As Births	As Deaths
1913.....	1,720	2,678
1914.....	1,469	2,745
1915.....	2,246	2,807

1920.....	2,495	2,868
1921.....	3,234	3,046
1922.....	3,115	2,946

Of the 3,115 still-births, 1,456 occurred in the cities, 235 in the towns, and 1,424 in the rural parts. Including the still-births with the living births for the moment, it is found that in each 1,000 children born, 41.8 are born dead, throughout the Province. In the cities, the rate is 45.3; in the towns, 45.1 and in the rural parts, 38.2.
